General information..... 12

Summary of findings for the year 2011

Gross farming income

Gross farming income (GFI) earned by the commercial farming sector was R131 541 million in 2011 compared with R122 550 million in 2010. The GFI figures reflect a growth of 7,3% between 2011 and 2010. A detailed composition of GFI by farming activity between the two years is provided in Table 1 and Table 2 on page 1. It can be observed from Figure 1 and Table 2 that the income generated from the sale of animals and horticultural products in the commercial agricultural sector increased in 2011. Table 2 shows that the highest percentage increase was recorded for income earned from the sale of animals (14,4%), followed by horticulture (9,6%). Field crops and animal products registered decreases of 3,6% and 0,2% respectively.

Table 2 also shows that the contribution of the different types of farming activities to GFI remained almost the same in 2011 as in 2010.

Figure 1 – Gross farming income by type of product

Current expenditure

The total current expenditure, excluding salaries and wages, incurred by the commercial farming sector for the financial year ending 28 February 2011 was R98 765 million compared with R89 911 million in 2010.

Figure 2 shows the major contributors towards the total current expenditure for both years. All major contributors to the total current expenditure increased in 2011. The highest percentage increase was recorded for fuel (12,9%), followed by repair and maintenance at 11,3%. Fertilisers registered the lowest increase (2,1%) (refer to Table 3 on page 2).

Figure 2 – Current expenditure according to major contributors (excluding salaries and wages)

Farming debt

The total farming debt among operators in the commercial farming sector was estimated at R80 513 million in 2011, an increase of 23,0% compared with 2010. Figure 3 and Table 6 illustrate that with the exception of mortgages, other debt categories increased in 2011 compared with 2010. Table 6 (on page 4) shows that mortgages decreased by 3,5% in 2011 compared with 2010.

Figure 3 – Distribution of farming debt by type of obligation

Capital expenditure

Total capital expenditure in the commercial farming sector amounted to R11 774 million in 2011 compared with R11 559 million in 2010, an increase of 1,9%.

The highest percentage increase in capital expenditure was recorded for plantations (126,7%), followed by computers and IT equipment (33,2%) and motor vehicles, plant, tractors, machinery and other transport (5,1%).

In contrast, decreases were reported in construction works, roads and parking areas (20,2%) and land and buildings (4,8%).

Figure 4 – Distribution of capital expenditure

Employment

The number of people employed in the commercial farming sector decreased by 5,1% from 866 455 employees in 2010 to 821 967 employees in 2011. The decreases in 'full-time' and 'casual and seasonal' employees were 6,0% and 4,2% respectively.

Explanatory notes

Introduction	<p>Statistics South Africa (Stats SA) conducted an agricultural survey in South Africa on farming units in 2011. A sample of 12 000 enterprises was drawn from Stats SA's business register (BR). The frame was adjusted by removing all the enterprises below the 0,5% percentile turnover. The BR is based on the income tax (IT) and value added tax (VAT) databases of the South African Revenue Service (SARS). All enterprises are legally bound to register for IT and/or VAT. Enterprises registered in the taxation system are included on the BR, and hence were given a chance of selection in the sample for the survey.</p> <p>This statistical release contains information regarding:</p> <ul style="list-style-type: none">• Income and expenditure items for the financial year;• Employment as at 28 February 2011 for the 2011 survey;• Employees' remuneration for the financial year;• Farming debt as at 28 February 2011 for the 2011 survey; and• Book value of assets at the end of the financial year.
Reference period	<p>The questionnaires for the Agricultural Survey 2011 were completed for the financial year which ended on any date between 1 March 2010 and 28 February 2011. The Agricultural Survey 2011 period is referred to as 2011 in the report.</p>
Purpose of the survey	<p>The Agricultural Survey covers the activities of commercial farms in South Africa which are registered for income tax (IT) and value added tax (VAT). Results are mainly used to monitor trends in the agricultural industry. Individual farmers use the results to position themselves relative to the industry as a whole.</p> <p>Users of the agricultural survey include:</p> <ul style="list-style-type: none">• Policy advisers in government for monitoring the performance of industries and their contribution to the South African economy, and for evaluating the effectiveness of industry policies;• Industry associations monitoring trends on their own and competing or complementary industries in order to inform their members of market changes; and• Individual businesses using the data to analyse their performance relative to their industry.
Scope and coverage	<p>The Agricultural Survey 2011 covers statistics of enterprises mainly engaged in:</p> <ul style="list-style-type: none">• Growing of crops, market gardening and horticulture (SIC 111);• Farming of animals (SIC 112);• A combination of the above (mixed farming) (SIC 113); and• Fish hatcheries and fish farms (SIC 132).
Classification by industry	<p>The 1993 edition of the <i>Standard Industrial Classification of all Economic Activities</i> (SIC), Fifth Edition, Report No. 09-09-02, was used to classify the statistical units in the survey. The SIC is based on the 1990 <i>International Standard Industrial Classification of all Economic Activities</i> (ISIC) with suitable adaptations for local conditions. Each enterprise is classified to an industry which reflects its predominant activity.</p>

Statistical unit The survey's data were collected at an enterprise level. An enterprise is a legal unit or a combination of legal units that includes and directly controls all functions necessary to carry out its production activities.

Size groups The enterprises are divided into four size groups according to turnover as recorded on Stats SA's BR. The size group stratification used in the survey was adopted from the Department of Trade and Industry's 2003 cut-off points. The size groups are indicated in Table A.

Table A – Cut-off points by size groups for the Agricultural Survey 2011

Size group	Turnover
1	Turnover ≥ R5 million
2	R3 million ≤ turnover < R5 million
3	R500 000 ≤ turnover < R3 million
4	Turnover < R500 000

Survey methodology and design

The survey was conducted by post, fax, telephone, email and personal visits. A sample of 12 000 enterprises was drawn using stratified simple random sampling for both years. The enterprises were first stratified at three-digit level according to the SIC and then by size of enterprises. All large enterprises (size groups 1 and 2) were completely enumerated. Turnover as recorded on the BR was used as the measure of size for stratification.

Weighting methodology

For those strata not completely enumerated, the weights to produce estimates are the inverse ratio of the sampling fraction, modified to take account of non-response in the survey. Stratum estimates are calculated and then aggregated with the completely enumerated size groups 1 and 2 to form the total estimates. These procedures are in line with international best practice.

Relative standard error

Data presented in this publication are based on information obtained from a sample and are, therefore, subject to sampling variability; that is, they might differ from the figures that would have been produced if the data had been obtained from all enterprises in the agricultural industry in South Africa.

One measure of the likely difference is given by the standard error (SE), which indicates the extent to which an estimate might have varied by chance as only a sample of enterprises was used. The relative standard error (RSE) provides an immediate indication of the percentage error likely to have occurred due to sampling, and thus avoids the need to refer to the size of the estimate.

Table B – Variables in the agricultural industry within 95% confidence limits: Agricultural Survey 2010

Variable	Lower limit	Estimation	Upper limit	Relative standard error
	R'000			%

Glossary

Casual and seasonal employees: Include occasional and day labourers, e.g. shearers, reapers and fruit-pickers, but exclude contractors and their employees. May be employed for any period during the reporting year.

Current expenditure: Expenditure incurred in farming operations during the financial year in respect of the farming unit, as reported by the farmer. These expenses include seed stock, poultry feeds, fertilisers, fuel, packing material, electricity, interest paid and all other operating expenses except salaries and wages. Railage and rented transport are also included in the relevant purchases.

Farmer: Individuals, partnerships, close corporations, companies or other enterprises that operate a farming unit for their own account; or managers, foremen or other persons to whom the control of a farming unit was entrusted.

Farming debt: Includes all financial obligations incurred in respect of normal farming activities, such as mortgages, loans and credits received from organisations such as banks, cooperative societies and private persons. Debt in respect of other business enterprises is excluded. Particulars regarding farming debt are based on data submitted by the respondents.

Farming unit: Any unit on which one or more of the following farming operations are carried out for commercial purposes:

- Cultivation in the open air or under cover of field crops, vegetable plants, fruit or flowers;
- Operation of a tea, coffee or sugar plantation;
- Breeding of livestock, poultry, game or other animals, including freshwater fish, furred animals and trade in livestock; and
- Production of milk, wool, mohair, eggs or honey.

Full-time employees: These are people employed as at 28 February 2011, including:

- Owners directly involved in farming activities;
- Family members involved in farming operations; and
- Office staff, farm managers and foremen and employees who normally do farm work.

Gross farming income: Gross farming income, as reported by the farmer, includes income earned from agricultural products sold, but excludes other income. In this release, agricultural products are divided into field crops, horticultural products, animals and animal products.

- **Field crops:** Include cereals, oil seeds, legumes, sugar-cane and fodder crops.
- **Horticultural products:** Include vegetables, fruits and nuts.
- **Animals:** Include livestock, poultry, game, aquaculture and all other animals.
- **Animal products:** Include milk, eggs, hides and skins, wool and feathers.

Other farming income: Income generated from the sale of forestry and bee farming products and any form of income generated from primary farming (excludes income from crops, animals and animal products and aquaculture).

General information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data; and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries:

National Library of South Africa, Pretoria Division
National Library of South Africa, Cape Town Division
Natal Society Library, Pietermaritzburg
Library of Parliament, Cape Town
Bloemfontein Public Library
Johannesburg Public Library

Eastern Cape Library Services, King William's Town
Central Regional Library, Polokwane
Central Reference Library, Nelspruit
Central Reference Collection, Kimberley
Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

Electronic services

A large range of data is available via online services and computer printouts. For more details about our electronic data services, contact: (012) 310 8600 / 8390 / 8351 / 4892 / 8496 / 8095. You can also visit our website: www.statssa.gov.za.
